

## LARGEST PRIVATE BANK

### One of the largest private banks manages & secures their End User Infrastructure more effectively

#### The Challenge

To manage the more than 4000 end user systems spread across more than 1000 locations in India, Bank wanted to deploy reliable, scalable, secure and cost effective Asset Management and End point security solution which will is required to manage & secure their end user systems. This project is also important for the bank to comply with various Security Compliances and Regulations.

#### Our Approach

Allied Digital conducted detailed need analysis exercise for the Bank. After completing the study Allied Digital proposed LANDesk Asset Management Suite and LANDesk Security Suite to address their requirement. With LANDesk suite Bank can manage their IT assets more efficiently by having information about Hardware & Software inventory, remote software deployment, remote desktop control and management, remote OS deployment, Software license monitoring and usage information. LANDesk Security suite also offered bank to perform Patch Management, remote vulnerability assessment and Anti-Spam /Anti-Virus update and management.

Allied Digital conducted POC (Proof of Concept) to demonstrate the capability and functionality of the system for approx 500 users in Mumbai. After successful POC, Allied Digital started the project of deploying LANDesk Asset Management and Security Management Suite across 1000+ systems across the country. Allied Digital has also deployed TrendMicro Antivirus Software and PointSEC Media Encryption software for improving end user system security.

#### Result

Bank now has the better control on end users IT assets & security. All the security patches, software and policies are pushed remotely to the end users. This project has also helped the Bank to comply to various security regulations.

#### Solution Building Blocks
